Commissioners Modesitt and Merritt:

As you know, the Ethics Commission has ruled that I cannot take part in any negotiations to purchase Town Square. I am therefore giving you a list of things that I believe you should consider in your negotiations with the owners of Town Square.

1. I believe we should hire an independent Structural Engineer to carefully examine the building with the original drawings to find any obvious or hidden flaws. This person should work for us (The Commission) and not be involved with any firm who will bid on the renovation. Consideration of such things as snow loading on the roof and load bearing walls should be examined.
2. The exterior of the building appears to be what I call drive it. This system has been known to harbor mold between the interior and exterior walls. The walls should be spot checked from inside to check for mold.
3. The elevator. I foresee many problems associated with the elevator. First, it has no practical use for Town Square except to transport parking customers to and from the building. I therefore suggest that the elevator be leased to the owner or owners of the parking garage (triple net lease) and they pay the County for the use and maintenance of the elevator. Another problem is, if the elevator is to be used twenty-four hours a day for parking, the building would be required to be open twenty-four hours a day. The elevator provides an extra entrance and exit, which could necessitate an extra security guard. Is the elevator ADA compliant?

4. Leased Space. The space presently leased to Blaine Myers needs to be discussed. I suggest that the sellers be required to buy out the lease or move Mr. Myers to office space under the parking garage. I do not believe the County should be in the rental business and be in competition with other landowners downtown.
5. Asbestos. The building should be examined and tested for asbestos and certified clean.
6. Environmental. I have questions about whether any records are available of the testing of the soils under the building for pollution from the buildings removed by the Urban Renewal Authority. If the elevator is hydraulic, the cylinder can leak and escape into the soil; therefore, it should be checked.
7. Utilities. Are all utilities (water, gas, electric) separated?
8. Good Title. It stands to reason that the building must have a good title free from defects.

If you have any questions about my comments feel free to contact me or consult with me at a later date.

Sincerely,

Robert K. Tebay
Wood County Commissioner

Sampling was conducted by Justin Godbey, Summer Intern in the Infectious Disease Epidemiology Program. Species identification was conducted by Greg Chrislip, IDEP Entomologist.

While the information lists diseases potentially carried by the various mosquito species, it DOES NOT infer disease confirmation by way of the larval sampling.

This survey identifies the species of mosquito larvae found during the July 2nd sampling activities.

The Crestwood Drive location in North Hills is the site of the bird identified with Eastern Equine Encephalitis. The 28th Street Trucking Warehouse, Wagner's, and Mahone's were identified by Mr. Chrislip as potential 'hot' locations due to their operations involving large numbers of tires.

Re: Results of Mosquito Surveillance Conducted on 2 July 2003 in Wood County

Dear Steve:

I am enclosing the results of the larval mosquito identifications from the Eastern Equine Encephalitis followup completed on 2 July 2003. Seven mosquito species were collected, they were *Aedes albopictus*, *Anopheles punctipennis*, *Culex restuans*, *Culex territans*, *Ochlerotatus atropalpus*, *Ochlerotatus japonicus* and *Ochlerotatus triseriatus*. I have listed the 7 species that could be identified along with the diseases they may vector. A total of 3 pupae could not be identified to species.

Aedes albopictus: vector for La Crosse Encephalitis, West Nile virus and dog heartworm. In tropical regions of the world it also vectors dengue fever.

Anopheles punctipennis: They can be infected with malaria in the laboratory.

Culex restuans: vector for West Nile virus

Culex territans: do not bite humans

Ochlerotatus atropalpus: possible vector of La Crosse

Ochlerotatus japonicus: possible vector West Nile and La Crosse

Ochlerotatus triseriatus: vector for La Crosse encephalitis
