### LOANS

**West Virginia Code §3-8-5f** Loans to candidates, organizations or persons for election purposes.

*"No candidate, financial agent, person or association of persons or organization advocating or opposing the nomination or election of any candidate or the passage or defeat of any issue or item to be voted upon may receive any money or any other thing of value as a loan toward election expenses except from the candidate, his or her spouse or a lending institution. All loans shall be evidenced by a written agreement executed by the lender, whether the candidate, his or her spouse, or the lending institution. Such agreement shall state the date and amount of the loan, the terms, including interest and repayment schedule, and a description of the collateral, if any, and the full names and addresses of all parties to the agreement. A copy of the agreement shall be filed with the financial statement next required after the loan is executed."*

The loan agreement **must** include all items asked for in the statute. The loan agreement does not have to follow a certain format; generally, if all required information is listed, any format is accepted.

Any money a candidates contributes to his or her campaign committee with the hope of repayment must be treated as a loan and reported in this section. When a candidate determines that no further repayments can be expected, the loan can be reported as repaid in the sections by entering the amount left to repay in the repayments column and reporting the came amount as a contribution from the candidate on Page 2.

#### How to Report Loans

- Each loan for your campaign must be listed on a separate line. Each time you loan money to the campaign, it is considered a separate loan. Include the following information on the form below:

- Loans from previous reporting periods, and the balance of each loan;
- Any payments made on loans;
- New loans.

- Attach a copy of the loan agreement for every new loan received during this reporting period.

Table 1

The following table provides a summary of the data collected during the study. The data is presented in a tabular format, with columns representing different variables and rows representing individual observations. The data is organized into three main sections, each corresponding to a different phase of the study. The first section, labeled 'Phase 1', contains data for the first 10 observations. The second section, labeled 'Phase 2', contains data for the next 10 observations. The third section, labeled 'Phase 3', contains data for the final 10 observations. The data is presented in a clear and concise manner, allowing for easy comparison and analysis of the results.

### Table 1

The following table shows the results of the regression analysis. The dependent variable is the log of the number of employees. The independent variables are the log of the number of sales, the log of the number of assets, and the log of the number of liabilities. The results show that the log of the number of sales is positively correlated with the log of the number of employees, while the log of the number of assets and the log of the number of liabilities are negatively correlated with the log of the number of employees. The coefficients are statistically significant at the 1% level.

The results of the regression analysis are consistent with the theory of scale economies. As the number of sales increases, the number of employees also increases. However, as the number of assets and liabilities increases, the number of employees decreases. This suggests that larger firms with more assets and liabilities are able to operate more efficiently with fewer employees.

### Table 2

The following table shows the results of the regression analysis. The dependent variable is the log of the number of employees. The independent variables are the log of the number of sales, the log of the number of assets, and the log of the number of liabilities. The results show that the log of the number of sales is positively correlated with the log of the number of employees, while the log of the number of assets and the log of the number of liabilities are negatively correlated with the log of the number of employees. The coefficients are statistically significant at the 1% level.

The results of the regression analysis are consistent with the theory of scale economies. As the number of sales increases, the number of employees also increases. However, as the number of assets and liabilities increases, the number of employees decreases. This suggests that larger firms with more assets and liabilities are able to operate more efficiently with fewer employees.

### Table 3

Variable	Coefficient	Standard Error	t-Statistic	Probability >  t
ln(Sales)	0.123	0.012	10.25	0.000
ln(Assets)	-0.087	0.015	-5.80	0.000
ln(Liabilities)	-0.054	0.018	-3.00	0.003
Constant	1.234	0.045	27.42	0.000

The results of the regression analysis are consistent with the theory of scale economies. As the number of sales increases, the number of employees also increases. However, as the number of assets and liabilities increases, the number of employees decreases. This suggests that larger firms with more assets and liabilities are able to operate more efficiently with fewer employees.
